PAYMENT INTELLIGENCE

PayLens

Making UPI transactions human-readable.

Merchant identity • location context • user feedback

Shreyash Desai
Office concept discussion | October 2026

UPI records are unreadable

01 A UPI ID does not always reveal the merchant

The ID may name an owner or legal entity rather than the shop the user remembers.

Payment	UPI identity	What remains unclear
₹450	xyzfoods123@okaxis	Which restaurant did I pay?
₹860	shreeent@paytm	Groceries, medicine or shopping?

02 No strong analytics of payments

Unclear merchants make spending totals and category comparisons harder to interpret.

“How much did I spend at Domino’s this month?”

OUR PROPOSED SOLUTION

Merchant resolution with context and AI

Input	How PayLens uses it	Example
UPI identity	Check saved mappings and merchant information.	balaji123@oksbi
Geolocation context	Use payment-time location to narrow nearby businesses.	Medical store: 20 m Supermarket: 170 m
AI assistance	Rank candidates using name and business evidence, then suggest a category.	Balaji Medical Store Healthcare

Result: a recognizable merchant and spending category

Low confidence? Ask the user and reuse their correction for future matching payments.

Original identity stays intact. MVP uses simulated nearby-business evidence and AI scoring.

Unknown merchant? Let the user teach PayLens.

01 **First payment: ₹80 to ramesh123@oksbi**

No reliable merchant evidence at Demo Location D. Payment succeeds; review is required.

02 **User confirms: Office Tea Stall**

Save Food & Dining and an optional personal alias; retain the original UPI identity.

03 **Repeat payment at the same scope**

Use the confirmed mapping immediately. Zero AI calls for this repeat resolution.

04 **Corrections stay traceable**

Keep the previous result in audit history; use the correction for future matching payments.

DASHBOARD VALUE

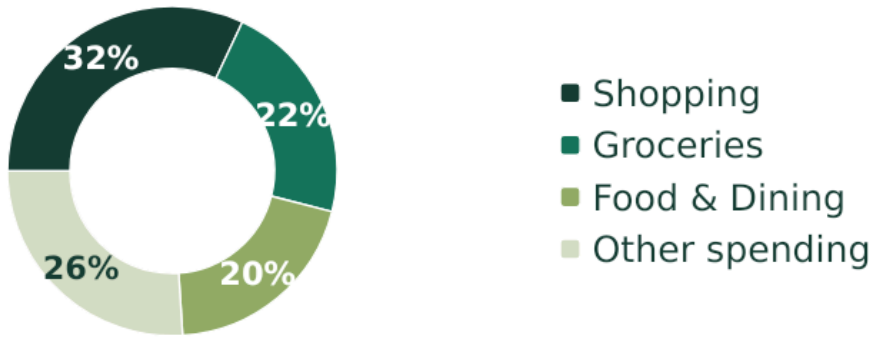

Better Spending Insights

MONTHLY SPENDING
₹25,579

TOP CATEGORY
Shopping

FOOD & DINING
₹5,124

Where does my money go?

Which payments explain the total?

Domino’s near office

Domino’s Pizza

xyzfoods123@okaxis

Food & Dining **₹450**

Search a familiar name. Open its payments.

Merchant totals **Monthly comparisons** **Transaction drill-down** **Alias search**

Illustrative dashboard with synthetic payment data. Merchant detail shows a separate example payment.
